

A delegation from the UK visited the BIOAGRO facility the 3rd of April 2009

The group from the UK – very curious, experienced and pleasant persons.

Bengt-Erik Löfgren founder and CEO of ÄFAB is explaining how Sweden introduced the carbon tax and simultaneously decreased CO2 emissions by 9%, increased GDP by 45% and increased biomass heating by 80%. The BIOAGRO system is one way to accelerate this process by unlocking combustion potential in agricultural residues.

Experienced combustion expert and BIOAGRO project partner Hotab via founder Gert Tarstad is engaging the audience in the combustion technologies of the BIOAGRO system.

David Andersson of Ecoera AB is informing about biomass chemistry

Bengt-Erik and Gert hosts two groups respectively.
